

API integration

API endpoints → 1 file
APIs config → 1 file.

Reusable components

- ↳ Debouncing
- ↳ Throttling
- ↳ fetch API calls

Custom Hooks

Lifecycle Methods

- ↳ prefix + use
- ↳ always returns a value.

/basenr1/endpoints)

Lifecycle component Methods

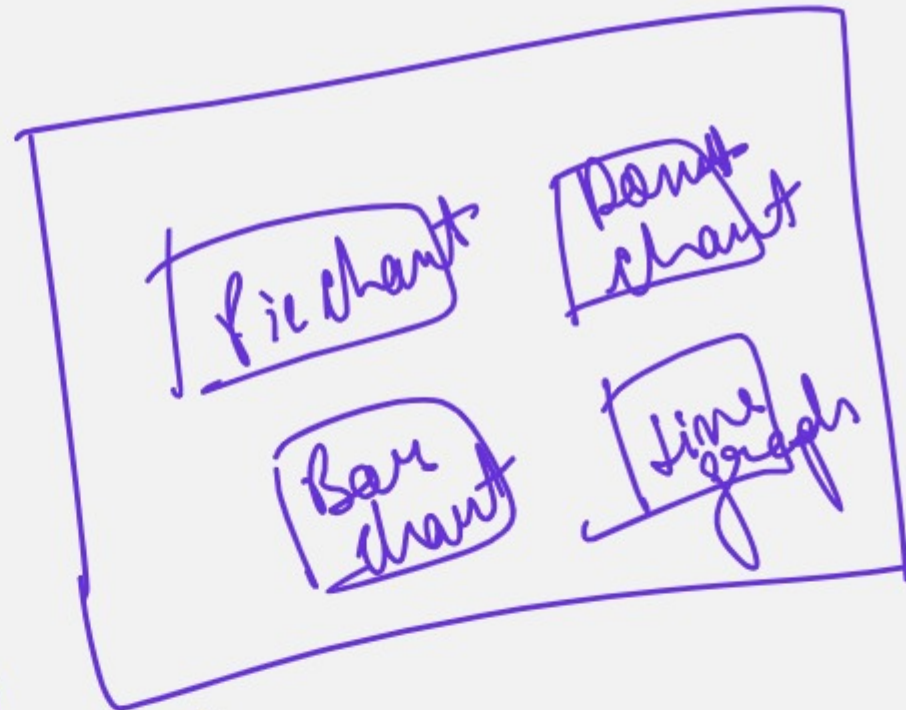

↳ class Based

① Mounted
(become a part of DOM)

② Updated
(update of state)

③ Unmounted

Clear interval
remove events
③ component will unmount

crypto,
stock trading

↳ constructor
getDerivedProps from state
render() → should component update? → A
⑤ render
⑥ component didUpdate → A
